

The Healthcare AI Agent Playbook

How clinics, dental offices, and med spas deploy AI agents to capture every patient call - and stop losing revenue to voicemail.

The \$12,000/month problem

Healthcare practices miss 30% of incoming calls during business hours. The average dental office loses \$12,000 or more in monthly revenue from missed calls alone. Med spas lose high-value consultations to voicemail every evening. The front desk is not the problem - capacity is.

What an AI receptionist does

- * Answers every call on the first ring, 24/7/365.
- * Books appointments in real time by checking your calendar.
- * Answers FAQs about hours, insurance, pricing, and services.
- * Routes urgent calls and captures detailed messages.
- * Speaks multiple languages including English, Dutch, Papiamento, and Spanish.

Deployment in 24 hours

Agentis maps your workflow in a 45-minute call, trains the agent on your FAQ, calibrates the voice to your brand, and goes live the next day. No technical setup required.

ROI at a glance

- * Starter Agent: \$199/month.
- * Captures 3+ additional appointments = pays for itself.
- * Average new patient lifetime value: \$2,000-\$5,000.
- * Recover one new patient per month = 10x return.

Next step

Call +1 (786) 435-1045 to hear Marcus, the Agentis demo agent. Then book the AI Agentic Assessment to design your agent stack.
